

# Supporting the LIPID MAPS 2016 Annual Meeting:

## *Lipidomics Impact on Metabolic, Cancer, Cardiovascular and Inflammatory Diseases*

Thank you for your interest in supporting the LIPID MAPS 2016 Annual Meeting. Meeting support allows us to keep registration fees low and to provide networking opportunities for meeting participants.

### Support Opportunities

LIPID MAPS is pleased to recognize the following two support levels for the 2016 meeting:

**LEAD Supporters:** For support in the amount of \$5,000 or more, Lead Supporters will receive top billed recognition on our meeting website, in our program book and orally during the meeting. Lead supporters will also be entitled to waived registration fees for three representatives at the meeting.

**Supporters:** For support in the amount of \$2,500 or more, supporters will receive recognition on our meeting website, in our program book and orally during the meeting. Supporters will also be entitled to waived registration fees for a representative at the meeting.

### Meeting Overview

The LIPID MAPS 2016 Annual Meeting will bring together biological and biomedical scientists in a wide range of fields to share new findings and methods in the broader lipidomics field and to explore joint efforts to extend the use of these powerful new methods to new applications with the ultimate goal of better understanding lipid metabolism and the active role lipids play in diabetes, stroke, cancer, arthritis, Alzheimer's and other lipid-based diseases so as to facilitate development of more effective treatments.

The meeting will feature approximately 20 talks by leading scientists in the field and poster sessions. It also offers ample opportunity for networking, including a reception and dinner on the first day of the meeting, breakfast, lunch, and morning/afternoon coffee/snack breaks on both days of the meeting.

The 2015 meeting attracted about 200 participants, including professors, research scientists, postdoctoral scholars, graduate students, and industry scientists. Feedback from the LIPID MAPS meetings has been very positive. Over 95% of participants who returned an evaluation form in recent meetings said they would recommend the meeting to a colleague, and also rated both the quality and relevance of presentations "good" or "excellent". While interest in the meeting continues to grow and we sold out in the past few years, we intend to keep the meeting at its current size and atmosphere.

LIPID MAPS, an NIH-funded multi-institutional effort (2003-2013), isolated, identified and quantitated all of the major, and many minor, lipid species in mammalian cells using a systems biology approach and sophisticated mass spectrometers and also quantitated changes in response to perturbation.
