

Cholesterol Ester Internal Standard
16 July 2007
By: Patrick Hutchins

This protocol is for the preparation of the ^{13}C internal standard solution for the screening cholesterol ester species from cells. This document is a place holder so that LIMS entries can be made.

Reagents required:

30 mL amber glass bottle (Schott Type I plus, obtained from Avanti Polar Lipids)

Standard	Volume	[M+H]⁺	<i>m/z</i> [M+NH₄]⁺	LM ID
-----------------	---------------	--------------------------	--	--------------
